Emerald, VIC | Bachelor of Software Engineering (Honours) - Monash University

PROFESSIONAL SUMMARY

I am a Software Engineering (Honours) student at Monash, graduating 2027. I've 4+ years of experience translating technical problems for non-technical people; balancing the best interests of residents with regulatory due process, privacy constraints and organisational efficiency.

EDUCATION

Bachelor of Software Engineering (Honours) - Monash University, Clayton

- Expected graduation: November 2027

WORK EXPERIENCE

Casual Customer Support Officer - Cardinia Shire Council *Oct 2022 - Present*

- Resolve 60+ customer enquiries daily requiring interpretation of Victorian building regulations, planning constraints, and local laws while developing strong skills in breaking down jargon for technical and non-technical stakeholders.

- Coordinate with 20+ internal departments to deliver what residents need to a high standard and within the designated turnaround time for any given enquiry.

- Maintain data accuracy and privacy compliance across multiple enterprise CRM and receipting systems

Guided customers through regulatory processes, reducing escalation rate and improving first-contact resolution

NOTABLE PROJECTS

GroundTruth - AI-Powered Project Compliance Assistant

• **Description:** Native iOS application helping Victorian property owners and small contractors understand planning permits, building regulations, council approvals, and project costs through ML & AI-powered compliance guidance.

• **Tech Stack:** Swift, SwiftUI, Firebase (Firestore/Storage), Google Gemini API, MapKit, CoreLocation, on-device Machine Learning

• **Key Contributions:**

1. Architected, designed and implemented the whole system end-to-end.
2. Architected a RAG-powered project assistant and compliance assessment engine that evaluates permit and approval requirements, generates tailored project roadmaps, and estimates associated regulatory costs.
3. Implemented interactive geospatial visualisation, cloud-backed project collaboration, and an on-device machine learning model for construction cost estimation, delivering an end-to-end project planning platform.

ARKHIVE - A Document Digitisation Solution for Businesses

- **Description:** Open-source web app that converts photos of documents, receipts, forms, and tables into structured, exportable data, with LLM powered chat-based validation and refinement of extracted content.
- **Tech Stack:** MERN stack, LLMs (OCR and conversational validation)
- **Key Contributions:**
  1. Led system architecture direction; researching, selecting, and training for the technical stack for a 14-person team.
  2. Designed and implemented the human-in-the-loop validation system, enabling users to refine AI-extracted data through natural chat-based interactions.

3. The sole architect responsible for CI/CD and testing infrastructure end to end, ensuring reliable builds and deployments across the team.

Goal-Tracking Bot | 13+ daily active users

- **Description:** Bot that lets users log, track, and stay accountable to daily goals.
- **Tech Stack**: Python, SQLite Database, Supabase for daily backups, self-hosted on Raspberry Pi (Debian home lab)
- **Key Contributions**: Designed and built end-to-end; currently serves 13+ daily active users; manage my own hosting infrastructure as well as managing user experience.

Melbourne Metro Transit Data Pipeline

- **Description**: Self-directed data engineering project ingesting live Melbourne Metro train delay data from PTV/Dept of Transport's GTFS-Realtime protobuf feeds.
- **Tech Stack:** Python, PostgreSQL (star-schema warehouse)
- **Key Contributions:** Designed an append-only grain schema to preserve delay history as a time series; automated ingestion via a scheduled polling loop.

Multi-Agent Personal Finance & Fitness Monitor

- **Description:** Multi-agent AI system that monitors personal finances, fitness metrics, and goal progress.
- **Tech Stack:** Python, SQLite Database, Claude API, self-hosted.
- **Key Contributions:** Architected system demonstrating coordinator pattern, context management, agent orchestration and more.

TECHNICAL SKILLS AND AREAS OF KNOWLEDGE

Languages, Frameworks and Concepts

- Python, JavaScript, typescript, Object Oriented languages (e.g. Java), MATLAB, SQL, NoSQL (various), Assembly, Swift
- Web frameworks: Vue, React, Tailwind, Vite, Express.js, NextJS
- Data Structures & Algorithms; experience covering dynamic programming, graph algorithms, string/parity problems and their applications.

Data & Analytics

- SQL and NoSQL (MongoDB, Cassandra, Neo4j, SQLite3, Postgres)
- Data warehouse design, OLAP, data cleaning

DevOps & Infrastructure

- Git/version control, Docker (dev/staging/prod/CI workflows), CI/CD pipelines
- Linux (Debian/Pi OS), VMware, self-hosted Raspberry Pi home lab

Operating Systems & Computer Networks

- Network configuration
- Linux (Debian/Pi OS)

Other skills

- Power BI, CAD (SolidWorks, Fusion360)
- Enterprise CRM and accounting systems (production environment experience)
- Experience with architecting and configuring agentic AI (LLMs, OCRs amongst others)
- Daily use of GitHub copilot in addition to agentic reasoning for productivity.
- IOS / Apple ecosystem app development

ADDITIONAL SKILLS AND ATTRIBUTES – MY PERSONAL BRAND

- Bilingual: English (native) and Persian (fluent)
- High agency, ownership and accountability
- Extremely receptive to constructive feedback
- Demonstrated ownership in delivering high-quality technical work with balanced risk consideration
